

Challenge:

A private medical school with more than 90 patient care centers came to us because their shadow IT created a risk for HIPPA violations. The school users were provisioning compute in AWS public cloud without central IT which caused efficiency issues as their research teams were working around central IT.

Solution:

WorldLink 's comprehensive solution included the following steps to ensure success:

- Cisco UCS Director based private cloud to ensure HIPPA compliance
- Single click, self-service portal for on demand research environments
- Ensured cloud tenant model mirrors the organization.

WorldLink helped the client reap multiple benefits including direct access to data, reduced costs and time.

Client Outcome:

Due to the solutions that WorldLink provided, the client was able to reap multiple benefits. Self-service eliminated shadow IT allowing the research teams to access data directly. IT controlled costs and ensured regulatory compliance. With the solutions applied, IT spent less time provisioning and the client's school ran more efficiently.
